Product Management: Product Requirements Documents (PRD), Product Scoping, Epics / User Stories / Acceptance Criteria, Backlog Management, Agile & Scrum, Stakeholder Management, Competitive Benchmarking, Requirements Elicitation, Technical Documentation

PROFESSIONAL EXPERIENCE

Trend Network LLC - Hookup

02/2026 – Present

Product Manager & Flutter Developer

Remote

- Built Hookup, a location-based dating application featuring likes and super-likes, profile boosts, a passport feature for browsing other cities, double-date matching, realtime online-presence indicators, photo verification and a premium subscription tier gating consumable purchases.
- Integrated a biometric face-verification SDK performing matching against user profile photos through a custom Flutter bridge.
- Built the admin dashboard supporting the platform, and contributed to the TypeScript backend service.
- Shipped to both the Apple App Store and Google Play, resolving review rejections covering user-generated-content safety requirements, an iPad-specific crash and support-URL accessibility.
- Owned product scoping for the platform, defining feature behaviour and subscription tiers with the client and coordinating delivery across backend and design.

HabariPay Limited (Squad) - Guaranty Trust Holding Company

02/2026 – 08/2026

Product Manager [Industrial Attachment]

Lagos, Nigeria

- Scoped and managed multiple payment products in Notion on a Jira-style Epic → Story → Task hierarchy, with specifications entering the same delivery queues as those of permanent staff.
- Authored a Booking Platform PRD across several revisions, covering escrow and funds-hold model, NIN identity verification, commission logic, dispute handling and Super Admin permissions.
- Scoped an Admin Dashboard product into 13 user stories and 67 delivery tasks with an accompanying screen brief for the design team; reverse-scoped a live fraud-detection platform into 8 documented features covering schema, role-based access control, alerting, transaction monitoring, analytics and audit logging.
- Specified a Split Settlement feature benchmarked against competing payment providers, and produced a commerce fintech strategy report plus a nine-feature product brief for the e-commerce line.

Lugo Electricals - MyElectrician

09/2025 – 08/2026

Product Manager & Mobile App Developer

Remote

- Built MyElectrician, a two-sided marketplace matching customers with vetted electricians — job posting and matching, in-app messaging, payments against linked bank accounts, reviews, a two-party rate-change negotiation flow, and content moderation.
- Delivered the companion Flutter admin console covering electrician vetting and approval queues, customer and job management, payment oversight and adjudication of rate-change requests.
- Contributed to the TypeScript backend powering jobs, matching and payments.
- Administered the full iOS distribution chain under an organisation-level Apple Developer account — certificates, identifiers, provisioning profiles and App Store Connect submission.
- Acted as product manager on the engagement, translating the client's requirements into written specifications and directing the backend and design contractors delivering against them.

Republic Club - Club Connect, Booking, Scanner & TV Applications

07/2025 – 05/2026

Mobile App Developer · 5 applications

Remote

- Built Club Connect, a club and membership management app handling club directories, membership tiers and renewals, QR-based member scanning at entry, downloadable documents and SOPs, and administrative user management.
- Built a venue reservation app driven by an interactive floor plan — a zoomable, pannable SVG plan with tappable table widgets overlaid in position, opening reservation sheets or existing booking details, across three table types with an admin reservation panel.
- Delivered Republic Scanner (ticket and credential scanning with an admin settings surface), Service Scan (lightweight service check-in) and Republic TV (display client with a dedicated television presentation mode).
- Managed the product across all five applications, scoping each against club operations requirements and keeping member, booking and access behaviour consistent between the clients.

Penbook Services - MyCards

12/2024 – 11/2025

Mobile App Developer

Remote

- Built MyCards, a digital greeting-card application where users select a template, customise it in a built-in card editor, and purchase through a credits system backed by in-app purchases.
- Implemented the full in-app purchase and credits flow across both platforms, covering product configuration, purchase validation and balance handling.
- Delivered category browsing, saved and liked cards, and an admin surface for managing the template catalogue.
- Sustained the product through twelve months of continuous release cycles — the longest-running engagement in the portfolio.
- Managed the product throughout, converting client requests into release scope and prioritising the catalogue, editor and purchase work across successive versions.

FREELANCE & CONTRACT DEVELOPMENT

Independent Delivery Practice - Client Engagements

12/2024 – Present

Product Manager & Lead Flutter Developer · Client scoping, delivery and contractor direction

Remote

- **Simmonster - Pantrio** (01/2026 – 09/2026) Meal-planning and pantry-management app: recipe library, meal planning, auto-generated grocery lists, home storage tracking and shopping through connected stores. Shipped multi-language support and a subscription tier.
- **Daniel Thercio - SPY Fashion** (02/2026 – 08/2026) Fashion resale marketplace with fixed-price and auction sales - browsing, bidding, cart and checkout, seller verification, order tracking, buyer-seller chat and user reporting. Delivered the admin console (ban controls, auction oversight, brand-submission review, seller approvals) and the TypeScript backend for listings, bidding, orders and checkout.
- **Daniel Thercio - I Am Nevaeh** (02/2026 – 04/2026) Daily-inspiration app where admin-scheduled quotes fire as push notifications timed to each user's local timezone, with saved-quote browsing and styled shareable image export.
- **Tekhaven Solutions - StakeCut** (02/2026 – 07/2026) Sports betting app with a social layer - multi-bet slips, paginated live leagues and standings, KYC verification, deposits and withdrawals, a short-clips video feed, and realtime chat over WebSockets with push notifications. Took the app through Google Play Real-Money Gambling approval - state-level gaming licence documentation, geo-restriction of unlicensed territories, adult age-gating, responsible-gambling disclosures and routing deposits outside Google Play billing - diagnosing and clearing a policy rejection to approval.
- **Titus Dawo - Wotch en Pik** (03/2026 – 08/2026) Classifieds marketplace for the Sierra Leone market spanning housing, vehicles, jobs, services and goods, with paid listings collected through Orange Money mobile money via an aggregator. Built deliberately low-data and Android-first for emerging-market networks; deployed the Flutter web admin panel to Vercel on a custom subdomain and evaluated CDN options to optimise media delivery.
- **Mamacare Sitters Limited - MamaCare** (03/2026 – 05/2026) Childcare marketplace pairing parents with nannies - profile and credential browsing, candidate messaging and care booking, with Checkr integrated for background screening before a caregiver can be engaged. Delivered the companion web dashboard.
- **Lewis Dongue - Dadadu** (08/2025 – 11/2025) Collaborator on a social app built around 20-second vertical videos in an immersive feed, with smart matching weighing proximity, intention and language, and a gamified progression system with virtual rewards.
- **Chronicles Software Development Company - Examination Preparation Suite** (08/2025 – 11/2025) Suite of five education applications: IGCSE Master Prep (authenticated student accounts), Success Reader (paged reading app with its own state and service layers), Common Entrance, and Checkpoint Primary and Secondary assessment apps — built on a shared architecture that reduced delivery time on each successive title.
- **TradeWize - Mobile Trading Client & Admin Console** (02/2025) Flutter trading client and companion admin application for the TradeWize platform.
- **Deep Run Road House - Meat Inventory** (03/2025) Tablet-optimised restaurant inventory tool for realtime meat stock, portion control and low-stock alerts keyed to time-of-day thresholds.

EDUCATION

University of Ibadan 2027

B.Sc. Computer Science. Ibadan, Nigeria

ADDITIONAL

Languages: English (Fluent)
